

JavaScript

Question1:

Imagine you are creating a website for a survey application. On the survey page, users can provide their feedback. You want to incorporate JavaScript dialogs to interact with users for different scenarios.

1. When a user visits the survey page, an alert box should pop up with a welcome message to greet them.
2. After the user completes the survey, a confirmation dialog should appear asking if they are sure they want to submit their feedback. If the user clicks "OK", an alert box should display a thank-you message. If the user clicks "Cancel", nothing should happen.
3. Additionally, you want to give the user an option to enter their name using a prompt dialog. If the user enters their name, an alert box should display a personalized message, including their name.

Question: Write the HTML and JavaScript code to implement the scenario described above.
